

# Progress Report Team5-NJ5

Date:- 15/07/2020

As per the Project Idea Report that we submitted early, we decided to start from the learning part first as most of the participants are beginners and don't know anything about Nodejs for that I along with my co-mentor prepared a Github repo: [Link](#) to provide resources and code to all the participants as well as the repo is the center of interaction for the project. we also conducted quizzes and assignments in the last weeks and listed them all in the repo. The Github repo also has a web version build using Github Pages: [Link](#)

As of now, we completed about 80% of the learning part including topics like:

1. Javascript Advance
2. Intro to Web Dev & Nodejs
3. Nodejs and NPM
4. Express
5. Postman API Testing
6. JWT Authentication
7. Passport Auth

We have left with 20% part including topics like MongoDB Database, CRUD App, Deployment, etc. that we will cover in the upcoming 1-2 weeks then we start with the main project **TradeByte**.

We are a little bit late as per the timeline shared early that's because some of the participants take a little longer in some particular topic than expected.

For complete progress and the resources refer the Github repo: [Link](#)

Thank You

**Pavan Gandhi**
